

JUMA PA1000 Enclosure Opening Instructions 2017-02-11

Normally do not open the enclosure of JUMA PA1000, especially in the one year warranty period.

Here are the instructions in case you need to open the top cover.

Do not remove the bottom cover because there are interconnections to the power supply.

1. Switch OFF the amplifier and disconnect the mains cable and wait at least one minute!
2. Removing top cover
 - a. Loosen the two handle screws but do not fully remove these screws (use bigger screw driver)
 - b. Remove four top cover screws located on the sides
 - c. Take off the top cover
3. Replacing top cover
 - a. Insert top cover. Note the notches for the handle screws on the right side.
 - b. Pre-tighten top cover screws and align top to the bottom cover. The nuts are sliding in the aluminum side parts. After aligning tighten the screws strictly.
 - c. Align the handle end parts and tighten the two screws very strictly (use bigger screw driver)

Note. Do not use the amplifier without covers!
